

It's True, Cash Is King

BILLING AND INVOICING

The concept of billing and invoicing does not need much explanation as we deal with bills continually in our daily lives, and you know what happens when you run out of money.

When looking for a tool, it is important that it includes these key attributes:

Integrated System – one cohesive business process tool will enable accelerated cash flow

Contract Agnostic - Fixed Price, Time & Materials, and Cost Plus billings are all supported

Traceability – bird's eye view of all transactions included in the invoice

Formatting - ability to create multiple, standard invoice formats to be used across projects, showing summary or detailed level information

Flexibility - add one-time items such as additional fees or discounts

Configurability - hide or show cost element detail on Cost-Plus invoices
