

## Unanet Overview

Unanet web-based software helps organizations manage people and projects for improved profitability, project performance, compliance to government regulations and reduced costs. For example, Unanet reduces processing costs by 90%. Beyond tactical improvements, the Unanet real time project reporting drives key decisions for choosing the right things to do. Unanet software is categorized in the PSA (Professional Services Automation) and PPM (Project Portfolio Management) software industry.

## Why is Unanet the “Easy” Professional Services Automation Software?

### Easy to Acquire

Unanet provides two easy licensing models: **Cloud** and **On Premise**. For each model, the pricing is by the number of user licenses. Your organization assigns one or more roles to each user such as manager, administrator, project manager, customer, timesheet user, expense user, billing manager, financials user etc. Unanet provides product demonstrations, collateral, references, and other information to assist in the evaluation process.

### Easy to Implement

Unanet installs in minutes and can be implemented for your organization in days and weeks instead of months and years. Unanet operates on many different technology platforms. Unanet operates using a web browser, requiring no other software on the client computer. Unanet has no need for Active X, Java Applets, or other software that could install viruses and damaging programs on the client computer. Unanet enables tailoring to your business process through the simple setting of parameters.

### Easy to Secure

Unanet provides security by role so people can access only data they have a right to see. A person logs into Unanet with a user name and password to obtain access to his/her assigned roles. Unanet can support Active Directory (single sign-on) and other directories for one username and password. Unanet uses SSL encryption to protect data transferring between the client computer and the server.

### Easy to Use

Unanet allows ubiquitous access to users in any location, at any time, and over any network connection. Unanet's modules are integrated with the same look and feel. Unanet's intuitive software is easy to learn. Unanet's on-line documentation allows people to easily use the software. Thus, Unanet lowers on-going training costs.

### Easy to Integrate

Unanet provides an integration manager to import data from back office applications, to export data to back office applications or to produce customer specific reports. Imports can be automatically scheduled to update Unanet. Unanet publishes its data model in an easy to use manner for reporting with third party software. Unanet provides an ad hoc reporting capability.

### Easy to Support and Maintain

Unanet encourages communication with its customers. Unanet's support is the best in the business. Unanet customer support people are responsive, knowledgeable, and understanding. Unanet is easy to upgrade to new versions. Unanet provides to customers training documents, release history, and other information on line at the [support site](#).

### Easy to Scale for High Performance

Performance testing of the Unanet software helps ensure that Unanet can scale to tens of thousands of users. Unanet currently operates in a production environment with over ten thousand users. Unanet is reliable – it is always working for you. Unanet executes rapidly on extremely large databases through innovative software.
