

Unanet's Automated Analyst

Do you want the peace of mind that your business rules are followed, data is accurate and reliable with no added personnel costs?

Unanet's Automated Analyst is the Answer!

MONITOR YOUR BUSINESS RULES

The Automated Analyst (AA) monitors your Unanet data for consistency and adherence to your organization's unique business practices. AA establishes business rules and data standards for time, expense, projects, people, organizations, and other functionality within Unanet. AA will automatically detect and correct errors with highly defined data standards. With looser data definitions, the system can detect errors and alert your team that corrections are needed. Together these quality indicators enable executives and management teams to have accurate and timely information to make critical business decisions!

BENEFITS OF MONITORING YOUR DATABASE?

- Build data integrity and consistency while reducing risk
- Provide visibility into stored data for organizations, projects, people, and more...
- Enable more efficient and effective business decisions
- Execute transparently to normal business operations
- Schedule to meet individual customer needs
- Increase confidence in KPIs that are driving your business goals

Hello! I'm the Unanet Automated Analyst.

I monitor your data 24/7/365.

I never take PTO or call in sick.

I need no training.

My job is to make yours easier!

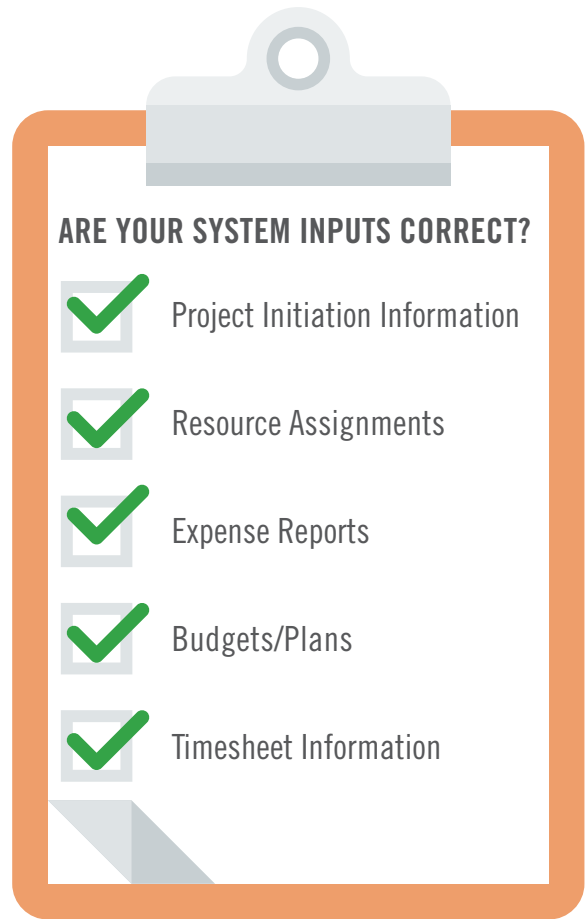

I can alert you when data anomalies occur
OR I can automatically fix the errors!

VALUE PROPOSITION

The current AA catalog includes 60 standard quality checkpoints, and can be expanded for additional business rules your organization employs. Users can efficiently view data outliers, given defined parameters, that can either be manually or systematically corrected, thereby significantly improving the quality and use of their Unanet data. This leads to more focus for managers on analysis and decision-making, which can have direct impacts on profitability.

These are just a few examples of data categories that can be monitored by the Unanet Automated Analyst. Your Unanet focal point can provide a detailed list of the 60 standard checkpoints and help you understand the art of the possible for your business rule needs!
